### CROSS-DATING ABSOLUTE TO NORMALIZED COORDINATES

### given

$$Y = \langle 5, 3, 2 \rangle$$

$$mean(Y) = \frac{10}{3}$$

$$sd(y) = \sqrt{\frac{\sum_{i=1}^{3} (y_i - mean(Y))^2}{n-1}}$$

$$= \sqrt{\frac{\left(5 - \frac{10}{3}\right)^2 + \left(3 - \frac{10}{3}\right)^2 + \left(2 - \frac{10}{3}\right)^2}{2}} \approx 1.527525$$

$$y_1^{std} = \frac{5 - \frac{10}{3}}{1.527525} \approx 1.09109$$

$$y_2^{std} = \frac{3 - \frac{10}{3}}{1.527525} \approx -0.2182179$$

$$y_3^{std} = \frac{2 - \frac{10}{3}}{1.527525} \approx -0.8728717$$
